Where We Are?

3

What We Do?

01

System Integration

We can make machines that can replace human and improve productivity.

02

Camera Vision

We can deploy vision camera systems based on Cognex technologies: Vision Pro, Insight, Deep Learning, 3D.

03

High-Quality Products

We supply a variety of automation equipment that meet the demands of customer.

Opportunities don't
happen.
We **create** them.

New era in technology is coming, in which robots and automatic lines will occupy the majority. So we focus our resources on the field of automation and image processing with the aim of being able to catch the trend and growing up stronger.

Quality and Innovation

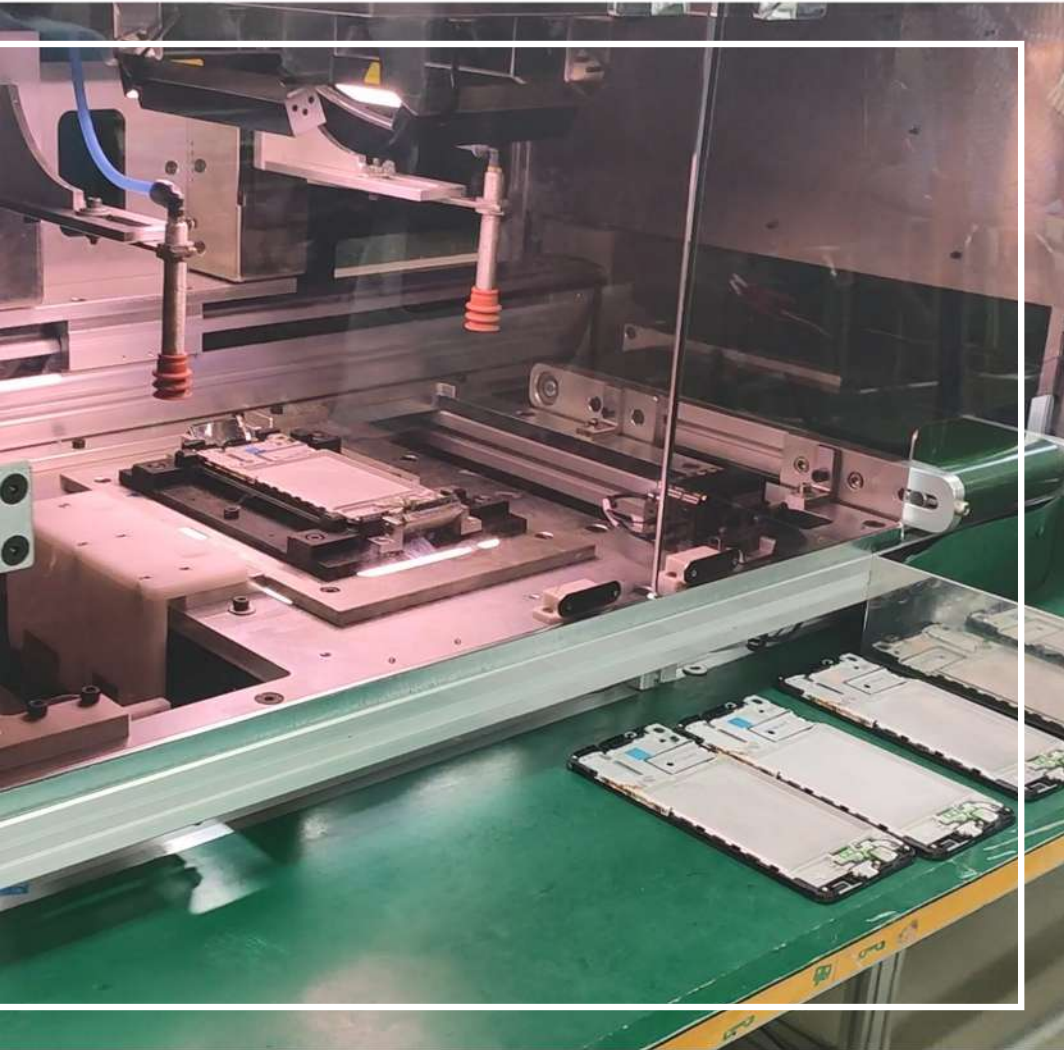

Mobile Phone Assembly Line Installation

In a competitive global mobile phone manufacturing market, manufacturers must stay agile when making quality and productivity improvement decisions, therefore production expansion is essential.

Be a reputable partner of COMPAL and FOXCONN in Viet Nam, we have installed, operated, and maintained many assembly lines for factories in Vinh Phuc and Bac Ninh province.

Mobile Phone Assembly Inspection Machine

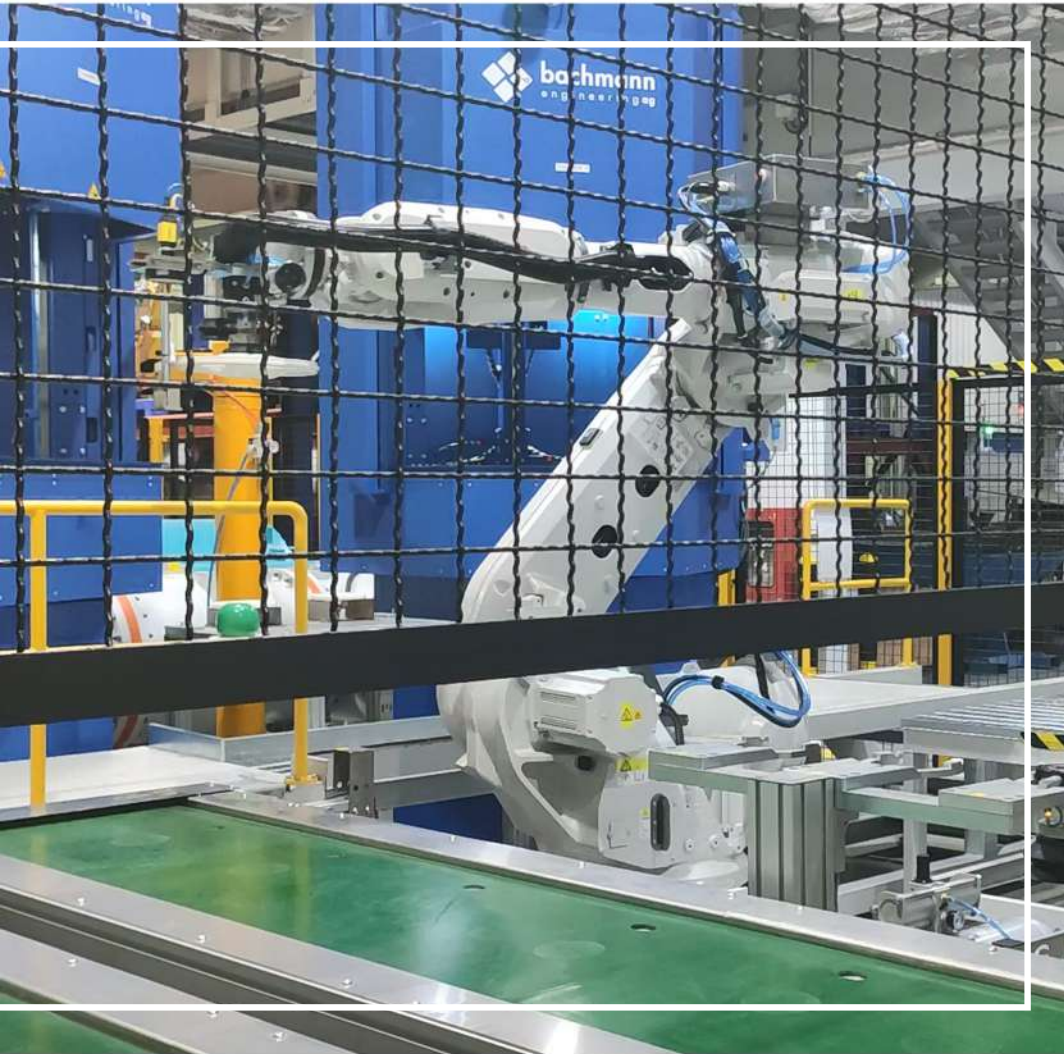

At the end of the assembly line, humans have to spend much time checking present/absent for a bunch of electronic components, but sometimes they make a mistake. Instead, we manufacture a vision machine that captures the whole mobile phone and check all of the components in few seconds increases productivity and accuracy for MOBASE and YOU&I TECH factories.

Mobile Phone Molding Frame Inspection Machine

Mobile phone frames after molding have burr and mistakes. These products are checked by a vision machine at high speed, non-stop then rejected by a pneumatic cylinder system.

Robot Alignment for Accuracy Pick & Place

When the robot working, just a tiny picking or placing error can damage the tester. Therefore, we combined the robot with a Cognex Insight Camera to help classify and align the position of products accurately.

High-accuracy Electronic Cable Measuring

After cutting from cable roll, humans can not use a magnifier and measuring machine to check one by one cable manually at a bulk. So that, we supply a vision machine for measuring both surfaces and two heads of cable within a second. Accuracy up to a few micrometers.

Laser Cutting Fabric Measuring

Product after cutting by laser machine sometimes have error profile. Our customer requires a vision machine that can measure and inspect that defects. A vision system developed base on Cognex Vision Pro technology absolutely meets the demands.

High-accuracy PCB Accessory Measuring

Humans use a master jig to check the dimension and distance between parts manually.

We proposed and deployed a vision solution. It helps them increase productivity four times and no wrong part can walkthrough.

OUR STRATEGIC GOALS

Reliability

We always try to create the best product to meet the requirements of end-users.

Best Services

We are ready to serve 24/7 with the most pleasant and gentle attitude.

Profit Increasing

Replacing people with automated machine will help increase profits and reduce costs.

We are an excellent team with members, who have many year experienced in the field of automation.

Excellence

Happy Customers

The happiness of customers is our best goal.

Innovations

We always cultivate the latest knowledge to give our customers the best solutions with the lowest prices.

Thank you!
